## Vault.getAbstractFileByPath() method

---

Get a file or folder inside the vault. If you need a file, you should test the returned object with `instanceof TFile`. Otherwise, if you need a folder, you should test it with `instanceof TFolder`.

### Signature:

```
getAbstractFileByPath(path: string): TAbstractFile | null;
```

## Parameters

---

Parameter	Type	Description
<code>path</code>	<code>string</code>	vault absolute path to the folder or file, with extension, case sensitive.

### Returns:

[TAbstractFile](#) | `null`

the abstract file, if it's found.
